

Statistics 12 - Hypothesis Testing - Solutions

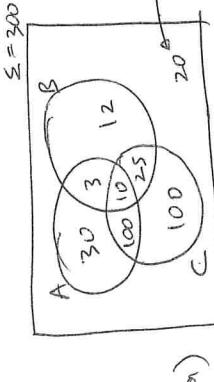

2.

a) $\chi_{\text{w}} \text{Bin}(10, 0.25)$

$$\begin{aligned} P(X \geq 5) &= 1 - P(X \leq 4) = 1 - 0.9219 = 0.0781 \quad \checkmark \\ 0.0781 > 0.05 &\Rightarrow \text{Accept } H_0, \text{ Reject } H_1 \quad \checkmark \end{aligned}$$

$$\begin{aligned} a) & P(C) = \frac{100 + 100 + 10 + 25}{300} = \frac{235}{300} = \underline{\underline{\frac{47}{60}}} \\ b) & P(A) = \frac{20}{300} = \underline{\underline{\frac{1}{15}}} \end{aligned}$$

$$\begin{aligned} b) & P(X \geq 5) = 1 - P(X \leq 4) = 1 - 0.9219 = 0.0781 \quad \checkmark \\ 0.0781 > 0.05 &\Rightarrow \text{Accept } H_0, \text{ Reject } H_1 \quad \checkmark \end{aligned}$$

c) $X = \text{no. flowers that produce a plant}$

$$\begin{aligned} a) & X \sim \text{Bin}(20, 0.45) \\ H_0: p &= 0.3 \\ H_1: p &> 0.3 \quad \checkmark \\ P(X \geq 10) &= 1 - P(X \leq 9) = 1 - 0.9520 = 0.0480 \quad \checkmark \\ 0.0480 < 0.05 &\Rightarrow \text{Accept } H_1, \text{ Reject } H_0 \quad \checkmark \end{aligned}$$

③

$$\begin{aligned} a) & H_0: p = 0.68 \quad \checkmark \\ H_1: p &\neq 0.68 \quad \checkmark \\ b) & 2 \text{ tailed test} \quad \checkmark \\ P(X \leq 3) &= 0.0001 \quad \checkmark \\ 0.0001 < 0.01 &\Rightarrow \text{Accept } H_1, \text{ Reject } H_0 \quad \checkmark \end{aligned}$$

i.e. from the sample there is sufficient evidence at the 1% level to support the gardeners view that she will be less successful with her petunia plants than usual. \rightarrow ④

5. $X = \text{no. female litters}$
 $X \sim \text{Bin}(20, 0.5)$
 $H_0: p = 0.5$
 $H_1: p \neq 0.5$

would expect $20 \times 0.5 = 10$ female litters. Since there were only 7 females we only need to check $P(X \leq 7)$

\rightarrow ⑤

$P(X \leq 7) = 0.136 > 0.025 \Rightarrow \text{Accept } H_0, \text{ Reject } H_1.$ \rightarrow ⑥

i.e. from the sample there is insufficient evidence at the 5% level to support the biologists prediction that the number of males & females will not be equal. \rightarrow ⑤

6. $X = \text{no. tails}$
 $X \sim \text{Bin}(50, 0.6)$
 $H_0: p = 0.6$
 $H_1: p \neq 0.6$

would expect $50 \times 0.6 = 30$ tails. Since there were 37 tails, we only need to check $P(X \geq 37)$

\rightarrow ⑦

$P(X \geq 37) = 1 - P(X \leq 36) = 1 - 0.972 = 0.028 > 0.025$

∴ Accept $H_0, \text{ Reject } H_1.$ \rightarrow ⑧

i.e. from the sample there is insufficient evidence at the 5% level to support Charles' suspicions that the coin has been made incorrectly. \rightarrow ⑨

\rightarrow ⑩

Section 3

1. $X = \text{no. veg meals ordered}$
 $X \sim \text{Bin}(20, 0.25)$
 $H_0: p = 0.25$
 $H_1: p < 0.25$

$P(X \leq 2) = 0.0912$

If test at 10% level would conclude Accept H_1 because $0.0912 < 0.1.$ If used on smaller significance would conclude Accept $H_0 \Rightarrow$ Abdul should use 10% test. \rightarrow ⑪
