BTEC Level 3 National in Applied Science/Forensic and Criminal Investigation

Unit 1: Principles and Applications of Science I – Chemistry (31617H/1C)

Edexcel and BTEC Qualifications

Edexcel and BTEC qualifications come from Pearson, the world's leading learning company. We provide a wide range of qualifications including academic, vocational, occupational and specific programmes for employers. For further information visit our qualifications websites at www.edexcel.com or www.btec.co.uk for our BTEC qualifications.

Alternatively, you can get in touch with us using the details on our contact us page at www.edexcel.com/contactus.

If you have any subject specific questions about this specification that require the help of a subject specialist, you can speak directly to the subject team at Pearson.

Their contact details can be found on this link: www.edexcel.com/teachingservices.

You can also use our online Ask the Expert service at www.edexcel.com/ask. You will need an Edexcel username and password to access this service.

Pearson: helping people progress, everywhere

Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

Unit 1: Applications of Science I – sample marking grid

General marking guidance

- All learners must receive the same treatment. Examiners must mark the first learner in exactly the same way as they mark the last.
- Marking grids should be applied positively. Learners must be rewarded for what they have shown they can do, rather than be penalised for omissions.
- Examiners should mark according to the marking grid, not according to their perception of where the grade boundaries may lie.
- All marks on the marking grid should be used appropriately.
- All the marks on the marking grid are designed to be awarded. Examiners should always award full marks if deserved. Examiners should also be prepared to award zero marks, if the learner's response is not rewardable according to the marking grid.
- Where judgement is required, a marking grid will provide the principles by which marks will be awarded.
- When examiners are in doubt regarding the application of the marking grid to a learner's response, a senior examiner should be consulted.

Specific marking guidance

The marking grids have been designed to assess learner work holistically. Rows in the grids identify the assessment focus/outcome being targeted. When using a marking grid, the 'best fit' approach should be used.

- Examiners should first make a holistic judgement on which band most closely matches the learner's response and place it within that band. Learners will be placed in the band that best describes their answer.
- The mark awarded within the band will be decided based on the quality of the answer, in response to the assessment focus/outcome and will be modified according to how securely all bullet points are displayed at that band.
- Marks will be awarded towards the top or bottom of that band, depending on how they have evidenced each of the descriptor bullet points.

Section B – Periodicity and properties of elements

Question Number	Answer	Additional Guidance	Mark
1 (a)(i)	electrical conductivity / lightweight / high melting point / low density	allow malleable allow conducts a current	1
		allow resistant to corrosion / does not corrode	
		allow durable	
		ignore does not rust	
		ignore thermal conductor / conducts heat	
		ignore high boiling point	
		ignore conducts alone	
		ignore strong	
		ignore references to delocalised electrons alone	
1 (a)(ii)	award one mark for an identification and one mark for a linked expansion	allow annotated diagrams for both mark points	2
	identification {atoms / ions / cations} are arranged in (regular) layers / atoms are all the	reject molecules	
	same size (1)	allow rows / sheets for layers	
	and expansion		
	{atoms / ions / cations / layers } can {slide / move} over one another (easily) (1)		
	OR		
	without breaking the (metallic) bonding (1)	ignore reference to delocalised electrons carrying a current	
		reject references to intermolecular forces	
1 (b)(i)	B ionic		1

1 (b)(ii)	award two identification marks and two marks for linked expansions	allow symbols instead of names throughout	4
	<u>identification</u>	allow correct half equations	
	(redox reactions) involve oxidation and reduction / increase and decrease in oxidation state (1)	allow (redox reactions) involve loss and gain of {oxygen / hydrogen / electrons}	
	oxidation is {loss of electrons / gain of oxygen / increase in oxidation state} (1)	allow oxidation is loss of hydrogen	
		ignore references molecules	
	reduction is {gain of electrons / loss of oxygen / decrease in oxidation state} (1)	allow reduction is gain of hydrogen	
	and two expansion points:		
	aluminium {gains oxygen/goes from oxidation state 0 to +3/ is oxidised/ loses electrons} (1)	reject aluminium gains electrons	
	iron oxide loses oxygen / iron (ion in iron oxide) {goes from oxidation state +3 to 0 / is reduced /	reject iron ions lose electrons	
	gains electrons} (1)	ignore iron loses oxygen	
		ignore iron oxide is reduced	
		ignore incorrect numbers as long as direction of transfer is correct	
		ignore aluminium displaces iron	
		ignore involves a transfer of electrons alone	
		if no other marks scored allow 1 compensatory mark for OILRIG alone / oxidation is loss reduction is gain alone	
		total	8 Marks

	Question	Answer	Additional	Mark
--	----------	--------	------------	------

Number		Guidance	
2 (a)(i)	В 🛦		1
2 (a)(ii)	D *		1
2 (b)(i)	p (block)	ignore references to groups	1
2 (b)(ii)	1s ² 2s ² 2p ⁶ 3s ² 3p ⁶		1
2 (c)(i)	OR increase from beryllium up to boron and then carbon on graph (1)		2
	decrease from carbon to nitrogen (1)	allow ECF	

2 (c)(ii)	award one mark for an identification and two marks for the linked expansion	allow ORA throughout	3
	marks for the linked expansion	allow London forces / dispersion forces / induced dipole / temporary dipole- dipole / instantaneous dipole for Van der	
		Waals	
	identification (higher atomic number means) more electrons (1)	ignore more shells alone	
		reject more electrons in outer shell	
	and two expansion points		
	(more electrons means) temporary dipoles become larger (1)		
	{Van der Waals / intermolecular} forces become stronger (1)	reject hydrogen bonding	
		ignore electrostatic attraction / forces	
	requires more {heat/energy} to {separate the molecules / break the (intermolecular) forces} (1)	reject more energy required to break the bonds alone	
		ignore references to ions / ionisation energies	
		total	9 Marks
			Marks

Question Number	Answer	Additional Guidance	Mark
		allan data an anagara	2
3 (a)	*	allow dots or crosses or a mixture of both	2
		ignore any inner shells drawn	
	(2)	reject diagrams that show electron transfer or ionic bonds	
	OR		
	(two) shared pair(s) of electrons between two oxygen atoms (1)		
	(two shared pairs and) rest of molecule correct (1)	max 1 mark if a charge is drawn on an otherwise fully correct molecule	
3 (b)(i)	division (1)	allow full marks for correct answer of 70 with no working	2
	1.40 2.00		
	percentage (1) Their fraction x 100	power of ten error gains 1 mark	
3 (b)(ii)		allow full marks for correct answer of 4.03 with no working.	3
		allow ECF throughout	
	<u>calculation of RFM of MgO (1)</u> 24.3 + 16 = 40.3	allow 2 x (24.3 + 16) = 80.6 (1)	
	calculation of number of moles of Mg (1) 2.43 (=0.1) 24.3	allow $\frac{2.43}{2 \times 24.3} = (0.05) (1)$	
	calculation of mass of MgO (1) $0.1 \times 40.3 = 4.03$	allow 0.05 x (80.6)	
	allow other alternative methods	allow use of 24 throughout	
		total	7 Marks

Question	Indicative content		
number			
4	Answers will be credited according to the learner's demonstration of knowledge and understanding of the material, using the indicative content and levels descriptors below. The indicative content that follows is not prescriptive. Answers may cover some or all of the indicative content but learners should be rewarded for other relevant answers.		
	 fluorine and oxygen are in the same period fluorine has a smaller atomic/ionic radius than oxygen larger number of protons but shielding is constant increasing nuclear charge pulls electrons in more tightly 		
	caoning madical analyse pane stock one in more digitaly		
	 sulfur and oxygen are in the same group sulfur has a larger atomic radius than oxygen and/or fluorine (because there is an) extra shell of electrons 		
	 {ions / ionic radius} are larger than the {atoms / atomic radius} from the same element electrons have been added same nuclear charge / same number of protons same amount of shielding nucleus required to attract more electrons / effective nuclear charge is reduced 		
	 fluoride ion is smaller than the oxide and sulfide ion fluorine forms a -1 charged ion whereas oxygen and sulfur form -2 charged ions / because 1 electron is added instead of 2 (therefore) effective nuclear charge is reduced further with oxygen and sulfur than it is for fluorine 		
	allow ORA throughout		
	ignore ideas about electronegativity or bonding pairs of electrons ignore references to sharing electrons ignore values quoted from the table alone		

Mark scheme (award up to 6 marks) refer to the guidance on the cover of this document for how to apply levels-based mark schemes*.			
Level	Mark	Descriptor	
Level 0	0	No rewardable material.	
Level 1	1-2	Adequate interpretation, analysis and/or evaluation of the scientific information with generalised comments being made Generic statements may be presented rather than linkages being made so that lines of reasoning are unsupported or partially supported The discussion shows some structure and coherence	
Level 2	3-4	Good analysis, interpretation and/or evaluation of the scientific information. Lines of argument mostly supported through the application of relevant evidence The discussion shows a structure which is mostly clear, coherent and logical	
Level 3	5-6	Comprehensive analysis, interpretation and/or evaluation of all pieces of scientific information Line(s) of argument consistently supported throughout by sustained application of relevant evidence The discussion shows a well-developed structure which is clear, coherent and logical	
	•	Total 6 Marks
