

Consider the following comments and identify who, or which approach, might have made it.

1 Understanding human behaviour is about understanding its adaptive value.

[Empty box for answer]

3 Too much emphasis has been placed on the way that environment impacts on behaviour at the expense of considering the more important impact of the individual themselves.

[Empty box for answer]

5 The focus of Psychology should be on studying the outwardly observable behaviours we can see rather than internal processes that we cannot.

[Empty box for answer]

7 I believe we can explain many physical problems by looking more closely at the mind. Dreams are a window into conflicts in the mind.

2 I declare this very first experimental Psychology labOPEN!!!

[Empty box for answer]

4 In order to understand the human mind and brain we need to continue to build ever more sensitive computer models.

[Empty box for answer]

6 In order to understand behaviour you have to understand the brain and its chemical processes.

8 Behaviourism offers useful explanations for some behaviours; however, the approach needs to pay more attention to cognitive processes and learning indirectly from the behaviours of others.

Consider:

Which word helped you work out the approach? This might be a useful cue for revision.
