Version 1.0 0711

General Certificate of Education (A-level) June 2011

Computing

COMP1

(Specification 2510)

Unit 1: Problem Solving, Programming, Data Representation and Practical Exercise

Final

Mark schemes are prepared by the Principal Examiner and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all examiners participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the candidates' responses to questions and that every examiner understands and applies it in the same correct way. As preparation for standardisation each examiner analyses a number of candidates' scripts: alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, examiners encounter unusual answers which have not been raised they are required to refer these to the Principal Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of candidates' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this Mark Scheme are available from: aqa.org.uk

Copyright

AQA retains the copyright on all its publications. However, registered centres for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to centres to photocopy any material that is acknowledged to a third party even for internal use within the centre.

Set and published by the Assessment and Qualifications Alliance.

The Assessment and Qualifications Alliance (AQA) is a company limited by guarantee registered in England and Wales (company number 3644723) and a registered charity (registered charity number 1073334). Registered address: AQA, Devas Street, Manchester M15 6EX. To Examiners:

When to award '0' (zero) when inputting marks on QMS and on scripts: A mark of 0 should be awarded where a candidate has attempted a question but failed to write anything creditworthy. Insert a hyphen when a candidate has not attempted a question. By these two actions the Principal Examiner will be able to distinguish between the two (nothing credit worthy/unattempted) when analysing any statistics.

The following annotation is used in the mark scheme:

- ; means a single mark
- // means alternative response
- / means an alternative word or sub-phrase
- A means acceptable creditworthy answer
- **R** means reject answer as not creditworthy
- NE means not enough
- I means ignore

No marks will be awarded for answers to testing questions where there is no evidence of programming code for the question(s) asked or where the screen captures provided by the candidate do not match what would be produced by the programming code provided by the candidate.

Qu	Part	Marking Guidance	Marks
1	01	0111 1011;	1
	02	256 // 2 ⁸ ;	1
	03	7;B;	2
	04	Easier for people to read/understand;	
		(Can be displayed using) fewer digits;	
		More compact when printed/displayed;	
		NE. Takes up less space	
		NE. More compact	Max 1

2	05	011;	1
	06	010;	1
	07	110;	1
	08	Gray code counters consume half the/less electrical power; Prevents some errors that can happen when the value changes; (When a value is incremented only one bit changes at a time therefore) there is less likelihood of an error occurring;	
		A. Fewer errors	Max 1

3	09	The number of pixels/dots; per cm/inch/unit of measurement;	2
	10	The number of bits used to represent (the colour/greyscale value); R. number of (different) colours of a single pixel;	2
	11	50;;// 10*10;*4÷8;//100; ÷2;//100;*0.5; MAX 1 if final answer not correct	2
	12	Does not <u>deteriorate</u> (A. Concept of deteriorating by implication) when enlarged/magnified // (usually) faster to transmit // (usually) faster to load // (usually) uses less memory/storage space // Easier to edit/manipulate objects in the image (A. Alternative word to object);	
		NE. Easier to edit/manipulate	1

4	13	Design;	1
	14	Testing; A. Installation	1

5	15	To measure out one litre of water;	1
	16	3 litre capacity jug; and 5 litre capacity jug; A. 2 jugs; sink; with a tap/water; drain; Bob // Bob's knowledge and problem solving skills; Time;	Max 3
	17	Who is responsible for solving the problem;	1

6	18	18, 23, 21, 36, 40, 45, 58, 59	
		Mark as follows: 18 in the first place; 23 and 21 in correct order and in the second and third places; 21 and 36 in the correct order and in the third and fourth places; 40, 45, 58 and 59 in the correct order and in the last four places;	
		A. Table 3 instead of Table 2 as long as the bottom cell of each of the scores column is correct (I. any working out)	4
	19	Bubble sort; NE. sort	1

End.
Mark as follows:
Correct variable declarations for Max, Current, Found,
PlayerName and correct declaration for the Names array;
Four correct values assigned to the correct positions in the Names
array:
Max, Current, Found initialised correctly;
Correct prompt followed by PlayerName assigned value entered by
user;
WHILE loop formed correctly and correct conditions for the
termination of the loop;
First IF followed by correct condition and IF statement is inside the
loop:
THEN followed by correct assignment statement within a correctly
formed IF statement;
ELSE followed by correct assignment statement within a correctly
formed IF statement;
Second IF followed by correct condition and IF is after the loop;
THEN followed by correct output within a correctly formed IF
statement:
ELSE followed by correct output within a correctly formed IF
statement;
I. Case of variable names, player names and output messages
```

		 A. Minor typos in variable names and output messages A. Max declared as a constant instead of a variable 	
		A. Alternative conditions with equivalent logic for the loop	
		A. Array positions 0-3 used instead of 1-4 if consistent usage	
		throughout program	11

	Procedure call; Passing TopScores as a parameter; Loop terminating condition and selection condition range both changed from 1-4 to 1-5;	4

48	****SCREEN CAPTURE****	
	Adapted menu is displayed; <i>This is conditional on sensible answer</i> for question 44	
	option 5 is selected, and accepted as valid input; <i>This is conditional on sensible answer for questions 45 and 47</i>	2
49	****SCREEN CAPTURE**** This is conditional on sensible answer for 45, 46 and 47	
	Contents of file are exactly as follows:	
	Ricky,12 Sachin,45 Brian,2 Janet,4	
	 A. Screen capture showing contents of text file I. Minor typos & capitalisation in Janet's name R. If Janet's name in the text file does not match the name used in 48 	1

	-		
13	50	Generate wider range of random numbers; add extra case statements for low score values / give low score values a bigger range in case statements than high score values; // Create a list/array containing a list of possible bowl die results where there are more 1s and 5s than 3s and 4s; generate a random number between 1 and the list size and use the bowl die result in that position in the list/array;	
		Mark as follows: Generate a wider range of random numbers; Explain how the extra random numbers could be used to have a higher chance of getting a score of 1 or 0 than a score of 4 or 6;	
		A. Replace case statement with if statements to allow different score values to have ranges of values associated with them (Pascal Only)	
		A. Other sensible suggestions for modifications to the Skeleton Program that would result in the desired behaviour change	
		MAX 1 if suggested changes would adversely effect other aspects of the game represented in the Skeleton Program e.g. does result in more lower scores than higher scores but would prevent a player from getting a result of out.	2
